Subject: Sampling in areas of undercut

Meredith and Amy,

I am hoping to arrange a conference call or a meeting on Tuesday to discuss approaches for sampling sand and/or sediments remaining in the undercut portions of the RM 10.9 Removal Area. Ideally would like to develop the sampling plan cooperatively with CDM. I can ask CH2M-Hill to propose an initial approach, but then discuss it with you before we finalize it and submit it for approval. Would be even better if you can contribute your knowledge, expertise and ideas to this process as early as possible. If this is an appropriate request, who is most appropriate to include on the meeting or teleconference invitation, and can we set something up for Tuesday afternoon?
